Reconceptualization of borderline conditions through the lens of the alternative model of personality disorders

Meisner M et al

Personality Disorders: Theory, Research & Treatment 13 (3) 266-276

Do my emotions show or not? Problems with transparency estimation in women with borderline personality disorder features

Lowyck B et al

Personality Disorders: Theory, Research & Treatment 13 (3) 288-299

Eating Disorders

Eating Disorders Training for Health and Care Staff

There is now training available for health and care staff on [eating disorders](#). This online learning helps in identifying and supporting people with an eating disorder. For nursing staff there are 3 sessions which take approximately 30-60 minutes each to complete (these can be completed at your own pace).

In order to access the *Eating Disorders Training for Health and Care Staff* you will need an elfh account. If you do not have one then you can register on the [elfh website](#).

Risk, demand, capacity and outcomes in adult specialist eating disorder services in South-East of England before and since Covid-19

Ayton A et al

BJPsych Bulletin 46 (2) 89-95

Attitudes toward veganism in eating disorder professionals

Fuller S, Hill K

BJPsych Bulletin 46 (2) 95-99

Veganism and eating disorders: assessment and management considerations

Fuller S et al

Reflective skills, empathy, wellbeing and resilience in cognitive-behavior therapy trainees participating in mindfulness-based self-practice/self-reflection

Mosler T et al

Psychological Reports epub reflective skills

Mindfulness-based online intervention increases well-being and decreases stress after Covid-19 lockdown

Bossi F et al

Scientific Reports 12 (1) mindfulness

Awe narratives: a mindfulness practice to enhance resilience and wellbeing

It is necessary to have available a variety of evidence-based resilience practices as we experience life's stressors including the ongoing COVID-19 pandemic. Evoking, experiencing, and reflecting on awe moments by developing and sharing an "awe narrative" are a type of mindfulness technique that can have the potential to help someone flourish, enhance their resilience, and have a positive impact on their overall wellbeing. This paper explores how constructing an awe narrative can assist the individual while also possibly having a positive impact on others.

Thompson J

Frontiers in Psychology 13 (Apr) awe narratives
