Forensic Psychiatry/Psychology

Quantifying the experiences of Black and Dual Heritage young people in a forensic child and adolescent mental health service

Sandiford M et al

BJPsych Bulletin 49 (6) 362-370

A pilot study of SEE DAR CBT in prison settings: effects of PTSD symptoms and recidivism rates

Post-traumatic stress disorder and childhood trauma are prevalent in prison populations, linking traumatic experiences to criminal behavior. This study aimed to examine the effectiveness of SEE FAR cognitive behavioral therapy in reducing post-traumatic stress disorder symptoms, depression, and subjective distress among male inmates, and to explore recidivism rates. SEE FAR cognitive behavioral therapy combines cognitive behavioral therapy, somatic experience, and imagery-based methods, incorporating therapeutic cards with artistic drawings to facilitate trauma processing across cultural barriers.

Gur A et al

Journal of Behavioral & Cognitive Therapy 35 (4) 100536

A culturally informed audit of psychological formulations completed in prison and community settings on the Offender Personality Disorder Pathway

Monero D et al

Criminal Behaviour and Mental Health 35 (5) 256-262

A systematic review of substance misuse treatment processes and outcomes as implemented in prisons for men in the UK

Barnett K et al

Criminal Behaviour and Mental Health 35 (5) 279-289

Patient-centered care competence in high-security forensic psychiatric nurses: the role of professional self-efficacy and attitudes toward forensic patients

Varol B et al

Journal of Psychiatric and Mental Health Nursing 32 (6) 1325-1333

Intellectual or Learning Disabilities

‘I don’t think they’ve ever seen people like me do jobs like this’: exploring hope within strengths-based employment services for people with disability

Carr-Kirby K et al

JARID 38 (2025) e70147

A call for inclusion: children with intellectual disabilities in trauma treatment research

Moore Z et al

Journal of Intellectual Disability Research 69 (11) 1272-1283

Exploring the perceptions of teachers, school principals and parents about the importance of classifying students with learning difficulties

Miscellaneous
<p>Systematic exploration of the lives and minds of eighteenth-century English murderers: causal narratives in the accounts of condemned prisoners published by the Ordinaries of Newgate between 1700 and 1750 <i>Historical narratives describing the development of systematic approaches to understanding the psychology of aggression commonly begin in the latter part of the nineteenth century. However, this ignores an important function of the crime literature that was a prevalent part of the huge expansion in publicly available printed material in England in the eighteenth century. The objective of the present study was to examine all issues of a serial publication about criminals (the Ordinary's Account) in the first half of the eighteenth century to identify any notions of causation for homicidal violence. Eighty-three manuscripts written about prisoners convicted of murder between 1700 and 1750 were subject to thematic analysis to identify causal themes. Biographical areas that feature regularly in the narratives are parentage, education, work and marriage status. There is also frequent mention of financial difficulties and previous manifestations of criminality or sinfulness. With regard to processes more proximal to the violent act, as well as explanatory processes invoking the tempting Devil and depravity, this analysis found frequent reference to phenomena that could be considered to represent a perturbed state of mind adopted by the murderer. One of the most common examples of this theme was 'passion' (a term that has been seen to be similar to the current usage of 'emotions') which was often deemed to act in opposition to reason. This study demonstrates that there had</i></p>

<p><i>been systematic approaches to understanding the lives and minds of violent offenders before the development of the formalised disciplines of psychology and criminology</i></p> <p>Rajan, Nathan</p> <p>Aggression and Violent Behavior 85 (Nov) 102100</p>

<p>Psychopharmacology</p>
<p>Recent Advances in Psychopharmacology</p> <p><i>The article focuses on the challenges and advancements in psychopharmacology, particularly in the context of clinical trials for psychiatric disorders. It highlights the difficulties in recruitment and the low approval rates for new psychiatric medications, emphasizing the need for innovative strategies such as pharmacogenetics to enhance treatment efficacy. The article reviews recent studies on various psychiatric medications, including new formulations and the role of genetic factors in treatment outcomes, while also discussing the potential of vitamin D as an adjunctive therapy for major depressive disorder. Overall, it underscores the complexity of psychiatric disorders and the necessity for a multifaceted approach to improve treatment strategies</i></p> <p>Van Westrhenen R, Young A</p> <p>Pharmaceuticals 18 (11) 1602</p>
