BRIEFING: Beyond winter pressures

This briefing provides a summary of evidence showing that corridor care has become embedded practice across many parts of the UK and is now a persistent, year-round crisis. It draws on updated testimonies from RCN members and new public polling commissioned by the RCN, underscoring the enduring scale and severity of the problem. See [here](#).

Expert organisations with “challenging” and “complex” service users: Representation in English and Welsh autism charity reports and accounts

Abstract: The language and imagery used in Autism charities' communications influences societal understanding of, and attitudes towards, Autistic people. This, in turn, shapes perceptions of whether and how the disabling barriers in society experienced by Autistic people can and should be addressed. Yet, to date, there has been minimal exploration of this discourse employed by Autism charities. We, an Autistic-majority team of researchers, used critical reflexive thematic analysis to examine the language and imagery used in the Trustees' Annual Reports and Accounts of 11 large English and Welsh Autism charities. Representation within these reports emphasises adversities associated with Autism, and the language chosen to portray Autistic people largely describes Autism as an impairment. In contrast, charities represent themselves as the solution to the 'problem' of Autistic people, and thus deserving of increased resources and funding. Government is largely depicted as ineffective and deficient. We argue that these Autism charities are thereby upholding – rather than challenging – the disabling barriers in society experienced by Autistic people. For Autistic charities to better represent Autistic people and improve wider societal understanding of Autism, there is a need for more positive portrayals that challenge the 'charity saviour' trope in charity communications. See [article](#).

The Research Room

The newest episode in a podcast series highlighting health research focuses on the impact of patient voices. *The Research Room* podcast, created by the York Trials Unit (YTU) at the University of York, takes a closer look at the BioDrive AFS trial — a major study examining the most effective ways to prevent and detect fungal infections in people with acute leukaemia. In this episode, Patient Advisory Group members Kate and Mary reflect on their experiences from diagnosis to becoming active research partners, demonstrating that patient insights are not only valuable but vital. See [here](#).

Menopause and prostate conditions prioritised for NHS's new online hospital

The NHS has selected nine common conditions which will be the first to be treated by the NHS Online service, providing faster access to specialist care. Launched by the Prime Minister in September 2025, today's announcement sees the first step in delivering the new NHS Online hospital, which will transform how healthcare is delivered, allowing patients to be triaged quickly through the NHS App, speak to doctors via video consultation, and monitored in the comfort of their home, saving unnecessary trips to hospital. See [here](#).

**Source:** NHS England**Childhood stroke guide**

Anyone can have a stroke, including babies and children, but the causes of stroke for children are very different from those for adults. This guide explains the causes and treatments, and the impact stroke could have on a child and their family. It also lists sources of help and support. See [here](#).

Source: Stroke Association**Patient Experience Data 101**

National Voices was commissioned by Pfizer to produce this guide sharing what patient experience data is, why it matters for quality care, and practical guidance on collecting data responsibly. See [guide](#).

Source: National Voices**Health Literacy Out Loud: Communicating Clearly with People Who Have Disabilities.**

Listen as the hosts speak with a guest about the wide range of disabilities, including intellectual, physical, and mental health challenges, and how these can influence communication. The conversation explores practical ways to communicate clearly and respectfully with people who have disabilities, highlighting approaches that support better understanding and inclusion. It also discusses the value of involving individuals with lived experience in clinical care, research, and community settings, emphasising how their perspectives enhance outcomes for everyone involved. See [Podcast](#).
